

UNIGE-DPNC STATUS AND PLANS

- ▶ **Decommission the T3 dedicated cluster and negotiated access to the central cluster (Baobab)**
 - ▶ To run *central ATLAS production*
 - ▶ New ARC CE (ARC 5) in GE has been setup by the local Baobab team, being commissioned as we speak
 - ▶ Still not clear what share of the cluster will be allowed to ATLAS
 - ▶ In the longer term, might federate with UNIBE-LHEP and contribute to the T2 pledge (e.g. dedicated cores, or opportunistic, or both)
 - ▶ Local T3 users submit directly to the cluster (not via ARC)
- ▶ **Storage for UNIBE-LHEP_LOCALGROUPDISK**
 - ▶ Local disk servers operation has been seamless so far
- ▶ **Pursue in parallel the SMRless solution and test it**
 - ▶ Original idea: gridftp server on top of BeeGFS (central storage)
 - ▶ Didn't hear anything on this since our last f2f
- ▶ **Issues in identifying valid site contacts for GOCDB**
 - ▶ Ongoing GGUS ticket
